The Apple Watch Series 5 combines all the features you could ever want from a wearable band. Every year, Apple has been adding necessary features to make the Apple watch better. The Series 2 came with the needed power for native apps. After that, Series 3 brought cellular connectivity and Series 4 had display pushed to full capacity. Series 5 allows for an always-on display. The watch is now a watch. If you own the Series 4, an always-on display may not be reason enough to upgrade. However, the Series 5 offers much more. Apple is not the first manufacturer to do this, but they might as well be the best. Monochrome veneer, secondary display layer—all these things are not there. You only get an existing watch face; always on. How does it work? With previous versions, the Apple Watch would go into sleep mode when you were not interacting with it. The same thing happens with the Apple Series 5.

iOS 7 is a dramatic re-invention of Apple's mobile software that goes beyond mere additions and enhancements: The company is changing the very look of iOS itself. The overhauled design sports flatter icons, less skeumorphism, and thinner typefaces. That said, you won't be completely lost if you've used prior versions of iOS: Apple hasn't changed the home screen much, and the basic gestures and interactions are largely the same, with a few new exceptions. This guide packs in everything that's new in iOS 7, how to upgrade, and more.

The new iPhone SE was released on March 2016, but was not made available to customers until early April. It is referred to by some as the iPhone 7, coming in after the iPhone 6, iPhone 6S, iPhone 6 Plus and iPhone 6S Plus. It is cheaper and smaller than the other iPhones that have been released in previous years, but boast many new features along with those seen in the recent iPhone 6S.

The new device, HomePod, offers an easy and amazing way for Apple users to enjoy AirPlay, Apple Music, and control their HomeKit devices from anywhere. HomePod was not created to be a competitor to Google Home or Amazon Echo, just as the MacBook Air was not designed to compete against the netbook. Of course, they do share a number of characteristics. For instance, the HomePod smart speaker can be voice-controlled and the MacBook Air is compact and lightweight. However, HomePod is just a $350 home assistant; much like the MacBook was a $200 laptop computer. The Fire Phone by Amazon was not much of a hit. Alexa, therefore, had to sell a lot so that Prime could stick into more people's lives. This was a success, thanks to the priced-to-move Echo. Google, on the other hand, made a brilliant decision to follow in the footsteps because it has to satisfy its insatiable data thirst. When it comes to HomePod, something was a little different. The AirPod was designed to help you enjoy your favorite music on the go while HomePod was designed to help you enjoy your favorite music in a convenient way in your home. AirPods lacked wires and sufficient surface area for traditional buttons. Because of this, the Siri voice control was the only way to interact

with the gadget (you have to be near the device). The Ultimate HomePod User Guide Apple has always made headway in making the best devices with great features. The iPhone SE (Special Edition) is no different. The latest Apple phone was released at a press conference on March 21, 2016. The official release to the public was on March 31, 2016. It is the smallest phone in the iPhone line and can be seen as a skilful combination of the iPhone 5s and the iPhone 6s. This is a great combination creating a phone that is sleek and efficient. Many reviews have said that the new iPhone is a powerful and complete device in a small 4 inch package. The new iPhone has been designed with the features users have been accustomed to along with new upgrades for their clients. Some of the new features includes the increased storage capacity of 16GB or 64GB, new powerful display and improved camera for your pictures. The device can be used to make calls using the internet and has fingerprint features that can help to identify you and process transactions faster.
