There are few industries in which decisions are so intently scrutinized by millions of Canadians as the healthcare industry. Each day important decisions concerning the funding and delivery of healthcare are made far from the patient's bed, in the offices of administrators and policy makers. These decisions can have considerable impact on the lives of patients and the practice of healthcare professionals. Whether you are a seasoned executive or an entry-level manager, *Administration Ethics* is intended to assist you in rendering effective and ethical decisions. Brimming with engaging examples, this text provides a practical guide to understanding the essential but often challenging areas of ethics theories, principles, codes, and rights, and insightfully illustrates how these concepts are integrated. *Administration Ethics* goes beyond academic debate and enters the daily practice of health administration. It examines the psychology of decision making, revealing how we sometimes make well-intentioned, but unethical decisions. Each chapter includes illustrative cases pertinent to the ethical management and policy decisions required of healthcare administrators. Featuring a new, user-friendly decision model and designed specifically with the Canadian healthcare system in mind, this volume will be an indispensable resource for both current and future healthcare administrators in Canada.

This book constitutes the refereed post-conference proceedings on Learning and Intelligent Optimization, LION 14, held in Athens, Greece, in May 2020. The 37 full papers presented together with one invited paper have been carefully reviewed and selected from 75 submissions. LION deals with designing and engineering ways of "learning" about the performance of different techniques, and ways of using past experience about the algorithm behavior to improve performance in the future. Intelligent learning schemes for mining the knowledge obtained online or offline can improve the algorithm design process and simplify the applications of high-performance optimization methods. Combinations of different algorithms can further improve the robustness and performance of the individual components. Due to the COVID-19 pandemic, LION 14 was not held as a physical meeting.
